Muwoni WebSaver

Save public webpage resources and package permitted project source on your Windows computer.

WHAT THIS APP DOES

Paste a public URL to save a webpage or an allowed website. WebSaver combines available HTML and resources, and can create a compressed website ZIP for the pages it retrieves.

INSTALL ONCE

1

Download the WebSaver setup

Use the Windows setup link on the official Muwoni WebSaver website once published.

2

Run the setup

Choose an install location. Open WebSaver from the new Desktop or Start-menu shortcut.

3

Keep the app open while saving

The installed app runs locally; internet access is still required to retrieve public websites.

USE IT

1

Paste a public webpage URL

Choose Save webpage for one page or Save entire website for linked public pages.

2

Watch the progress indicator

WebSaver reports collection progress and shows download options when the capture is ready.

3

Download the result

Choose HTML, source XML, a technology report or a compressed website ZIP when available.

IMPORTANT NOTES

- WebSaver cannot bypass login pages, paywalls, private content, robots controls or source website security.
- A saved HTML file is a reference for permitted rebuilding work; interactive services can need their original backend.
- Always respect copyright, website terms and authorization when saving websites or source material.
